Allowable Subject Matter

1. Claims 1-34 are allowed.
2. The following is an examiner's statement of reasons for allowance: the instant invention accurately extracts a straight-line portion of the contour line of a target object on a variable-density image. Upon acquisition of a variable-density image of a target object, the instant invention extracts edge pixels contained in the image, calculates the directions of the extracted edge pixels, and sets directions of straight-line portions contained in the contour. After setting the directions, the instant invention then sets a different one of labels to each of the directions of the straight-line portions, and assigns to those edge pixels which have the same direction as one of the different directions of the straight-line portions the same label assigned to the corresponding one of the different directions of the straight-line portions, and extracts, as a line segment, an assembly consisting of those of the edge pixels which are continuous on the image and have the same label assigned thereto. The closest prior art of Venkateswar, et al do not rely upon the above-identified features for the extraction of straight lines contained in an image, and thus these features in combination with all of the other elements of the claims are not disclosed or fairly suggested either by the prior art of Venkateswar, et al or by any of the prior art of record.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
